University of Strathclyde Glasgow

Do you have a tendency to double clean, double check or double worry? If so we need you….

This is a two phase study, however only 50% of individuals will be asked to complete phase two since the researcher is looking for subjects with a range of obsessive compulsive behaviour scores.

If you agree to participate in the study the researcher will send you a participant information sheet. Following this you will be invited to complete phase one in which you will be asked to complete a consent form and an online questionnaire. Following this 50% of participants will be invited along to phase two. During phase two you will complete another consent form, more questionnaires measuring OCD and aspects of memory and some simple touch screen computer tasks, this phase will take approximately 1hour.

If you are interested in participating in this study please contact Elise Campbell:

lorna.elise.campbell@strath.ac.uk

Of those participants completing the online questionnaire (phase one), around 50% will be asked to complete phase two.
